

Science Unit 4

Animal Growth and Changes

Name: _____

Science - Unit 4

Animal Growth and Changes

Before you begin the worksheets watch...

YouTube video [How Do Animals Grow and Change](#)

And BrainPop video on [Classifying Animals](#).

Science

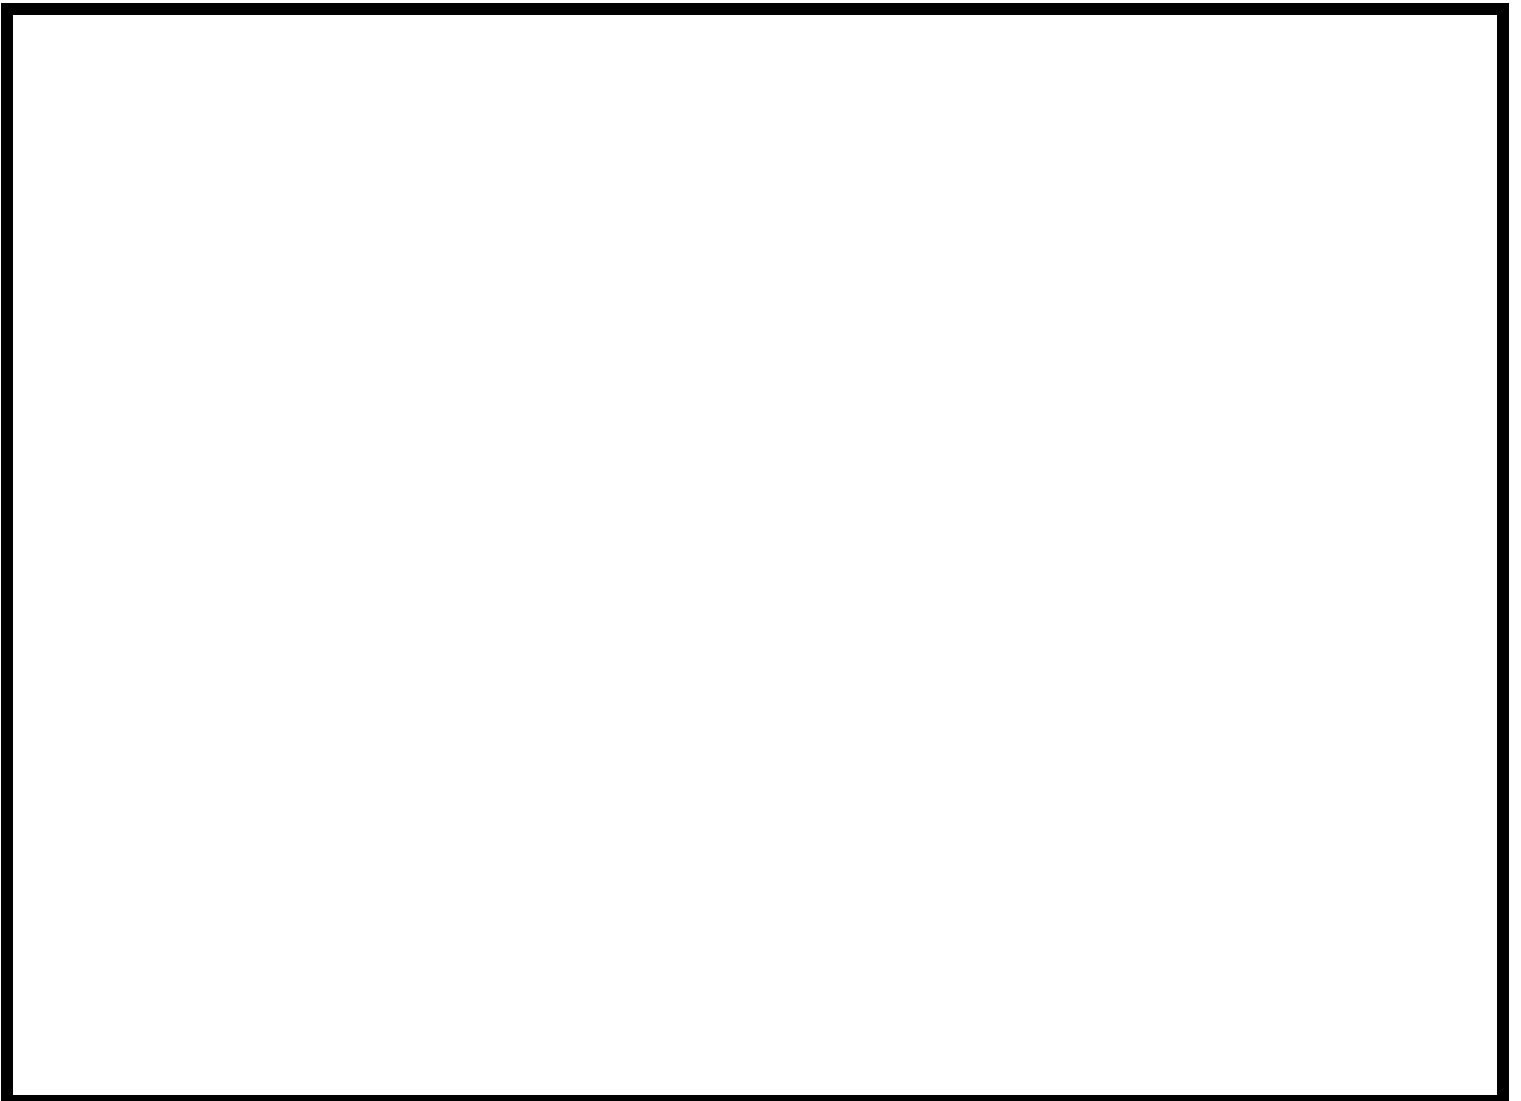

Comparing Animals

All animals are the same because they breathe, eat, move, rest, grow and are able to reproduce (have babies).

All animals are different in how they look, what they eat, how they move, how they have babies and where they live.

Animals live where they can find things they need to survive. This is their **habitat**.

Think of an animal in the wild. Draw it in its habitat.

Science

Animal	Where Does it Live?	What Does it Eat?	What Type of Body Covering Does it Have?
1.			
2.			

How are your two animals the same?	How are your two animals different?

Draw a picture of your two animals.
